About QuintaDB

QuintaDB is an online database and web form builder. You can import data from Excel or create a web form step by step, embed a form widget on your site and collect data into your database from your own site.

Apart from the ability to create Widgets for Forms, Tables, Reports and Login forms, you can also create Graphs and Charts, Maps, and display data in a Calendar.

There may be as many Forms as possible in the Project. You can also have as many Projects as you like. In essence, the Project is a database, and Form is a table.
