Chief Complaint (CC)	Follow-up for Rash and other nonspecific skin eruption. Monitor for Fluconazole tablet.
HPI	A 71-year-old male with a medical history of Diabetes mellitus, Cellulitis, cerebral infarction, muscle weakness, and hypertension. The patient was seen today for a Rash and other nonspecific skin eruption on bilateral feet. The patient was lying in bed with no signs or symptoms of distress; The patient denied headache, chest pain, abdominal pain, nausea or vomiting, fever, or any other symptomatology. The patient was educated about the importance of taking the medication as prescribed and the implications of not taking the medication. Education was given on the significance of hand washing and daily showering. The patient verbalized understanding.
Allergies	No known allergies
Current Medications	Fluconazole tablet; 150 mg; amt: 150 mg; oral Special Instructions: Take one tablet every Wednesday for 4 weeks. Begin: 03/05/2025 - 03/27/2025 End: 03/27/2025
ICD-10 Diagnosis	R21 Rash and other nonspecific skin eruption
Antibiotics	Fluconazole tablet; 150 mg; amt: 150 mg; oral Special Instructions: Take one tablet every Wednesday for 4 weeks. Begin: 03/05/2025 - 03/27/2025 End: 03/27/2025
Other recommendations	The patient should keep the affected skin clean and dry, avoiding excessive scratching to prevent further irritation or infection. Wearing loose-fitting, breathable clothing can help reduce discomfort. Monitoring for worsening symptoms, such as spreading rash, pain, swelling, fever, or signs of infection, is essential, and medical attention Should be sought if these occur. Education was given on the significance of hand washing and daily showering. The patient verbalized understanding.
